

# Camera Capabilities Disclosure

## What is this label?

This label is part of an initiative to promote transparency about the presence and capabilities of video cameras. It is intended to inform people entering a space that a camera is in use and to clearly communicate what data is being collected. The label summarizes key features such as video, audio, motion detection, face recognition, and how data is stored and retained.

## Device Capabilities Summary

- Video Recording: The Nest Doorbell (Battery) captures HD video when motion is detected or when someone rings the bell.
- Audio Recording: The device records audio as part of the video clip.
- Motion Detection: It uses onboard sensors and AI to detect movement and trigger recording.
- Face Recognition: With a Nest Aware subscription, the doorbell can recognize familiar faces based on user-tagged profiles.
- Two-Factor Authentication: Access to video footage requires Google Account sign-in with optional 2FA enabled.
- Storage: Video events are stored in the cloud via the Nest Aware service.
- Retention: Events are retained for up to 30 days and can be deleted manually by the account owner.

## Contact Information

For questions or concerns about this camera and its use, please contact the owner at:  
[dario@jenario.com](mailto:dario@jenario.com)

## More Information
